Hoosick Falls – PFOA: On 11/14 Chief of Staff Chris Lyon and staff attended a meeting in Hoosick Falls, NY, at which issues concerning PFOA contamination were discussed. It was reported that recent blood tests in residents have shown a 40% reduction in PFOA levels over a 2 ½-year period, which Mayor Allen called great news. The mayor also reminded attendees that these reductions were predicted by health experts. The NYSDEC also informed the community that stack sampling would be completed in two months to evaluate the emissions from the McCaffery Street and Liberty Street plants. (EPA urged NYSDEC to do these tests. The McCaffrey St. facility is on the CERCLA NPL, and NYSDEC is in the lead role.) Residents welcomed the news.

National Management Plan on PFAS for Human Health: This week, OW led the completion of the internal draft of the National Management Plan on PFAS for Human Health in collaboration with other EPA offices and regions. The Management Plan was developed using input provided by many stakeholders at the National PFAS Summit, community engagements across the country, and the open public docket. It describes EPA's approach to identifying and understanding PFAS, addressing current PFAS contamination, preventing future contamination, and effective strategies for communicating with the public about PFAS. As early as next week, the Plan could be provided to OMB for review.
